SOLAR-100
Solar Power Meter

Optimize the placement of solar systems and verify window efficiency. The SOLAR-100 measures solar output that is used to calculate overall energy, efficiency and placement of solar systems.

■ **Measures the solar power and transmission up to 2000 W/m^2, 634BTU / (ft^{2}xh)**

■ **Power Mode – measurement of the power per unit area of incident solar radiation**

■ **Transmission Mode - calculates the solar power transmission percentage of the material for example how much solar power in % will be transmitted through the window**

■ **Convenient to read display with remote sensor technology**

■ **Selectable measurement units either W/m^2 or BTU / (ft^2 x h)**

■ **Data Hold**

■ **MAX/MIN functions to indentify locations with maximum or minimum power**

■ **Applications:**

　■ **Windows performance – calculation and verification of the heating or heat reduction caused by direct sunlight**

　■ **Solar radiation measurements**

　■ **Solar power research for location of the solar panels or solar water heater**

　■ **Physics and optical laboratories**

　■ **Meteorology**

　■ **Agriculture**
